

### Abstract

A dental floss holder (1) is described, which has a grip (4), into which can be inserted a floss supply spool, a fork (2) with two prongs (3), between which can be stretched a dental floss, as well as at least one holding element (8) for locking the dental floss, the grip (4) being substantially drop-shaped and constructed in shell-like manner, the grip (4) being connected to the fork (2) by means of an arm (9) and in which the at least one holding element (8) is fitted to the top of the arm.
